PRESS RELEASE

Cyma Builders & Construction Managers Announce Paul Hahr, Superintendent, Safety Certification Achievement

Pennsylvania, May 18, 2016: Cyma Builders & Construction Managers announced a safety certification achievement for one of their Superintendent's, Paul Hahr. On April 21, 2016, Paul passed the Board of Certified Professionals (BCSP) Safety Trained Supervisor in Construction certification. The STSC is a nationally recognized third party safety certification for those with supervisor responsibility in construction.

Paul Hahr has been with Cyma Builders & Construction Managers since 2011 and has displayed an incredible reputation amongst his clientele as well as his fellow employees. Tom Santoli, Director of Safety and Health for Cyma stated, "Paul Hahr is a diligent and experienced Superintendent that understands and embraces the critical role that site supervision plays in the construction safety effort. Paul has repeatedly demonstrated his ability to proactively identify safety and health challenges on complicated pharmaceutical construction projects and his skill implementing safety solutions in the field."

Cyma Builders and Construction Managers is a technical construction management firm, specializing in science and pharmaceutical industry applications. The Cyma team is comprised of experienced professionals with a comprehensive knowledge of the systems and processes common throughout our client's facilities and the industry as a whole. The strength and expertise of our individual employees allows Cyma to devise cost effective delivery solutions without sacrificing quality in project execution or finished product.

We pride ourselves in being flexible with our approach to the construction process and execution methods. This allows our customer's business objectives to remain the focus and priority, regardless of whether they're

shifting or consistent. This methodology has fostered many long-standing relationships and has contributed to the success of many of our projects.

Cyma Builders & Construction Managers believe that careful planning and meticulous execution, coupled with the appropriate project team and resources, are the formula for a successful project. Our Construction Management methodology, derived from years of experience executing technically complex projects, engages the necessary actions at each level to ensure that a project is delivered to specifications, within schedule and budget, causes minimal disruption to a facility or its supporting systems, and is commissioned and qualified without difficulty.

The bulk of our construction experience has been completed within occupied facilities and campuses, requiring a very strategic and disciplined plan that allows construction to be completed with minimal disruption to the existing operations. Our project management plan and project approach is built around four fundamental concepts; *Quality, Safety, Cost, and Schedule*. Each of these concepts are addressed in development of each project plan and evaluated on an ongoing basis throughout the pre-construction and construction process.
